

SRINIVAS KANDURI

Backend Engineer | AI-Driven Development | DevOps

Visakhapatnam, India • +91 6305689291 • srinivaskanduri03@gmail.com • github.com/SrinivasKanduri-Git • linkedin.com/in/srinivas-kanduri

PROFESSIONAL SUMMARY

Backend Engineer with 2+ years of production experience building scalable APIs and cloud-deployed services in Ruby on Rails. Skilled at leveraging AI coding agents — Claude Code, Lovable, Google Stitch, AI Studio, and Anti-Gravity — to architect, debug, and ship features faster. Comfortable owning full product cycles from architecture to deployment. Targeting backend, AI-assisted engineering, and DevOps-leaning roles.

TECHNICAL SKILLS

Backend	Ruby on Rails, RESTful APIs, MVC Architecture, ActiveRecord, Sidekiq, ActiveJob
Databases	MongoDB (Mongoid), PostgreSQL, Redis, SQLite3
Cloud & Ops	AWS, Docker, CI/CD Pipelines, GitHub
Frontend	React, JSX, HTML5, CSS3
AI Tools	Claude Code, Claude Skills & Plugins, Lovable, Google Stitch, AI Studio, Anti-Gravity, Cursor
Testing	RSpec, Minitest
Other	Agile (Scrum/Kanban), Query Optimization

PROFESSIONAL EXPERIENCE

Software Engineer I

Imaginnovate Tech Solutions

Feb 2025 – Present

- Built and maintained scalable backend modules for **FleetEnable**, a logistics TMS platform, using Ruby on Rails, MongoDB, and AWS — covering warehouse management, delivery operations, and third-party integrations.
- Designed RESTful APIs serving dispatch teams and external logistics partners; reduced endpoint latency through schema improvements and targeted query optimization.
- Improved Billing and Invoice architecture and optimized AR reports to provide better insights on shipper revenue.
- Delivered features iteratively in Agile sprints with daily standups, peer reviews, and cloud deployments on AWS.

Trainee Software Engineer

Jun 2024 – Feb 2025

Imaginnovate Tech Solutions

- Implemented Doorkeeper token-based authentication and Pundit authorization policies.
- Optimized legacy PDF and XLSX generation logic from a modular structure to service-class implementation for improved efficiency.
- Trained on MongoDB aggregation and Mongoid ORM query optimizations.

Software Developer Intern

Singular.dev

Nov 2022 – Feb 2023

- Contributed to backend feature development in a monolithic Rails architecture — implementing API components and resolving bugs across the stack.
- Worked within Agile cycles alongside senior engineers; gained hands-on experience with ActiveRecord, Rails conventions, and RESTful API design.

KEY PROJECTS

RubySkope — Rails Engine Gem for User Activity Intelligence

Ruby on Rails | In Progress | AI Tools: Claude Code, Stitch, Anti-gravity

- Architected and built a dual-ORM Rails Engine gem (Mongoid + ActiveRecord) providing self-contained user activity tracking — HTTP requests, background jobs, model diffs, and exceptions — without coupling to the host app's auth or infrastructure.
- Designed a middleware-driven async ingestion pipeline with thread-local context, JSONB-backed structured storage, diff tracking, and XLSX timeline exports.
- Built an isolated admin portal with BCrypt authentication and 5-fail account lockout — fully standalone with no host app dependency.
- Used **Claude Code** end-to-end for architecture, implementation, and debugging; applied custom **Claude Skills** for token-efficient iterative refactoring.

Docuaine — Document Ingestion & Spatial Editing Platform

In Progress | AI Tools: Claude, Google Stitch, AI studio

- Designed and built a multi-format document ingestion and spatial editing platform — parsing DOCX, XLSX, PDF, PPTX, and more into structured blocks on collaborative drag-and-resize canvas.
- Owned product architecture, sprint planning, and technical direction end-to-end; Improved Documents upload and canvas editors for better output and document conversions.
- Used **Claude** for architecture planning, **Claude Code** and **Anti-Gravity** as the primary implementation agent throughout the build.

The AI Reporter — Autonomous AI News Intelligence Platform

In Progress | AI Tools: Claude, Google Stitch, Lovable, Google AI Studio

- Served as product owner and sole architect for an India-first autonomous news platform with zero human editorial intervention — owning all product, stack, and AI pipeline decisions independently.
- Used **Claude** for product strategy, agent prompting, and engineering docs; **Google Stitch** and **Lovable** for AI-generated UI/UX; **Google AI Studio** for model evaluation and pipeline prototyping.

EDUCATION & CERTIFICATIONS

B.Tech in Computer Science Engineering — DRK Institute of Science and Technology, Hyderabad

Full Stack Java Developer — Naresh IT

Generative AI Foundations Certificate — UpGrad & Microsoft
