

SRINIVAS KANDURI

Backend Engineer | AI-Assisted Development | DevOps

Visakhapatnam, India • +91 6305689291 • srinivaskanduri03@gmail.com • github.com/SrinivasKanduri-Git • linkedin.com/in/srinivas-kanduri

PROFESSIONAL SUMMARY

Backend Engineer with ~1.5 years of full-time production experience building scalable APIs and cloud-deployed services in Ruby on Rails (plus 3 months internship). Proficient with MongoDB/Mongoid, AWS, and Docker. Actively applies AI coding agents — Claude Code, Lovable, Google Stitch, and Cursor — to ship features faster and more reliably. Comfortable owning full product cycles from architecture to deployment. Targeting backend, AI-assisted engineering, and DevOps-leaning roles.

TECHNICAL SKILLS

Backend	Ruby on Rails, RESTful APIs, MVC, ActiveRecord, Sidekiq, ActiveJob
Databases	MongoDB (Mongoid), PostgreSQL, Redis, SQLite3
Cloud & DevOps	AWS, Docker, CI/CD Pipelines, GitHub Actions, Jenkins
Frontend	React, JSX, HTML5, CSS3
AI Tools	Claude Code, Claude Skills, Lovable, Google Stitch, AI Studio, Anti-Gravity, Cursor
Testing	RSpec, Minitest
Practices	Agile (Scrum/Kanban), Query Optimization, Service Objects, API Design

PROFESSIONAL EXPERIENCE

Software Engineer I • *Imaginnovate Tech Solutions*

Feb 2025 – Present

- Built and maintained scalable backend modules for FleetEnable, a logistics TMS platform, using Ruby on Rails, MongoDB, and AWS — covering warehouse management, delivery operations, and third-party integrations.
- Designed RESTful APIs serving dispatch teams and external logistics partners; reduced endpoint latency through schema improvements and targeted query optimization.
- Improved Billing and Invoice architecture; optimized AR reports to surface clearer insights on shipper revenue.
- Shipped features iteratively in Agile sprints with daily standups, peer code reviews, and cloud deployments on AWS.

Trainee Software Engineer • *Imaginnovate Tech Solutions*

Jun 2024 – Feb 2025

- Implemented Doorkeeper token-based authentication and Pundit authorization policies across multiple API endpoints.
- Refactored legacy PDF and XLSX generation logic from a modular structure into service class implementations, improving maintainability and performance.

- Completed hands-on training in MongoDB aggregation pipelines and Mongoid ORM query optimization.

Software Developer Intern · *Singular.dev*

Nov 2022 – Feb 2023

- Contributed to backend feature development in a monolithic Rails architecture — implementing API components and resolving bugs across the stack.
- Worked within Agile cycles alongside senior engineers; gained practical experience with ActiveRecord, Rails conventions, and RESTful API design.

KEY PROJECTS

RubyScope — Rails Engine Gem for User Activity Intelligence *Ruby on Rails · Mongoid · ActiveRecord · In Progress*

- Architected a dual-ORM Rails Engine gem providing self-contained user activity tracking (HTTP requests, background jobs, model diffs, exceptions) with no coupling to the host app's auth or infrastructure.
- Designed a middleware-driven async ingestion pipeline with thread-local context, JSONB-backed structured storage, diff tracking, and XLSX timeline exports.
- Built an isolated admin portal with BCrypt authentication and 5-fail account lockout — fully standalone with zero host app dependency.
- Used Claude Code end-to-end for architecture, implementation, and debugging; applied custom Claude Skills for token-efficient iterative refactoring.

INVISIBLE — Multi-Layer AI Coding Agent Safeguard System *Ruby on Rails · In Progress*

- Designed a drop-in, single-package safeguard system to prevent AI coding agents from shipping production-unsafe code — three layers: 14 autoloaded domain safeguards, 6 silent advisors with severity tiers, and 13 opt-in max-performance skills.
- Architected the DECIDER component (critical path, 40% of Sprint 1) and a dedicated rule-validator stress-test sprint.

Docucaine — Document Ingestion & Spatial Editing Platform *In Progress · AI Tools: Claude, Google Stitch, AI Studio*

- Designed and built a multi-format document ingestion and spatial editing platform — parsing DOCX, XLSX, PDF, PPTX, and more into structured blocks on a collaborative drag-and-resize canvas.
- Owned product architecture, sprint planning, and technical direction end-to-end; improved document upload pipeline and canvas editors for better output and conversion fidelity.

The AI Reporter — Autonomous AI News Intelligence Platform *In Progress · AI Tools: Claude, Google Stitch, Lovable, AI Studio*

- Sole architect and product owner of an India-first autonomous news platform with zero human editorial intervention — owning all product, stack, and AI pipeline decisions independently.
- Deployed on Oracle Cloud free tier (FastAPI + Next.js 14); integrated pgvector/Supabase for semantic search, Groq as primary LLM, and sentence-transformers for multilingual embeddings.

EDUCATION & CERTIFICATIONS

B.Tech in Computer Science Engineering
Generative AI Foundations Certificate
DevOps Certification (In Progress)
Full Stack Java Developer — Naresh IT

DRK Institute of Science and Technology, Hyderabad
UpGrad & Microsoft
Online — Jenkins, Docker, AWS
